

ASSIGNMENT 5

MODERN WEB DEVELOPMENT WORKSHOP 1

(CSE2191) COURSE OUTCOMES- CO1, CO3, CO4, CO5

Learning Levels: Remembering(L1), Understanding(L2), Application(L3), Analysis(L4)

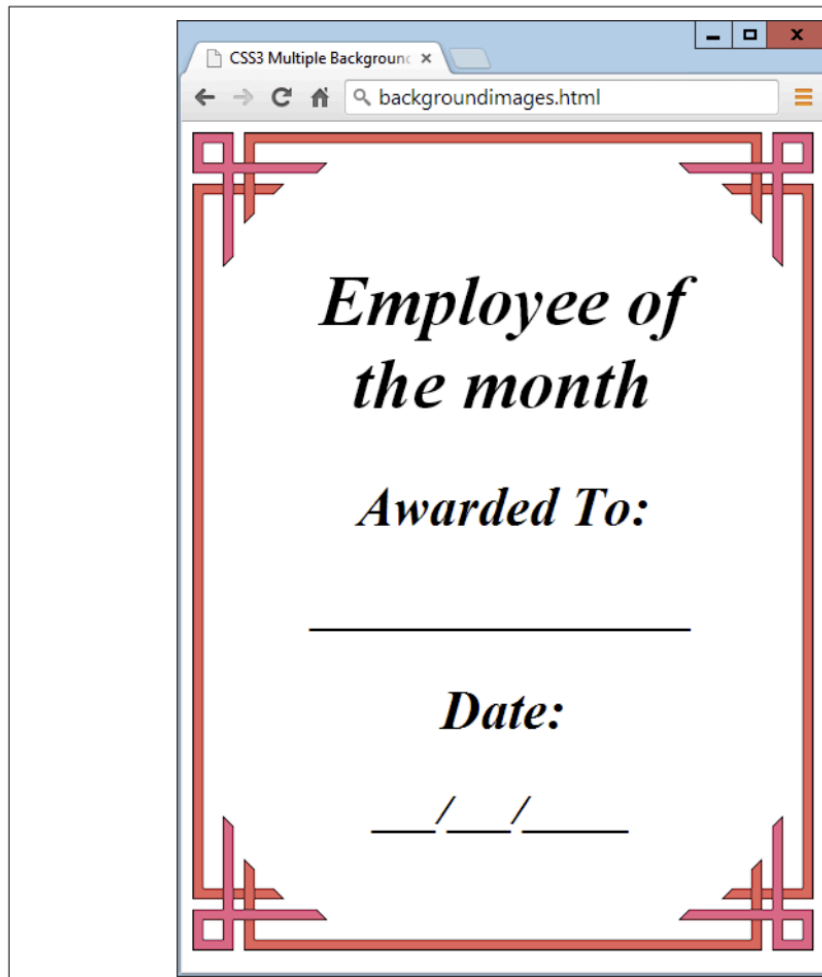

Name of the Assignment-> Introduction to CSS

Q No.	Question	Learning Levels
1	Create an HTML page with headings and paragraphs. Apply inline styles to the h1 and h2 headings, such as changing the font color and size. Use internal styles for the h3 and h4 headings by applying styles using the id attribute, such as setting text alignment and font-weight. Additionally, link an external stylesheet to define the body background color, style the h5 heading, and set the paragraph's text color and font size using the class attribute. Ensure the external stylesheet is properly linked to the HTML page.	L1,L2,L3,L4
2	Imagine you are designing a webpage for a product display. You want to style the product container using the CSS box model. The product container should have a content width of 600px, padding of 30px on all sides, a border of 15px, and a margin of 20px around it. Inside this container, place an image of the product along with a brief description. Arrange three products in a row and ensure that the images and descriptions are properly aligned within each container.	L1,L2,L3,L4
3	Design a simple HTML page that includes three boxes: box1, box2 and box3. Use CSS to give each box a fixed width and height. Set a different background color for each box. Apply a border with a red, green, blue color and 1px, 2px and 3px thickness respectively. Apply hover to show change in the padding and margin value. Note: The padding of the box increases by 30px (e.g, from padding: 10px to padding: 30px), and the margin of the box increases by 40px.	L1,L2,L3,L4
4	Add an image as the background of a <div> element and change the image source when the user hovers the mouse over the image. In other words, when the user moves the mouse pointer over the image, the background image should change.	L1,L2,L3,L4

5	Create a product page with detailed information about a selected product, including specifications, customer reviews, and purchase links. Following Key Elements to be included: I. Product Specifications: • Use a nested unordered list to display product specifications in categories(e.g., Dimensions, Features, Materials). • Include a definition list to describe key terms used in the specifications. II. Customer Reviews Section: • Create a blockquote for each review with the reviewer's name and date. • Use preformatted text (``) for a sample review that includes line breaks. • Style each review with a border and padding using the box model properties. III. Links to Buy: • Add a list of links to different purchase options (e.g., Amazon, eBay). • Use attribute selectors to style links based on the `href` domain (e.g., Amazon links appear in one color, eBay in another). • Include an anchor tag with an id attribute to allow users to jump to the purchase links from the top of the page. IV. CSS Styling and Layout: • Use float to arrange the product image to the left of the description. • Control the size of each section using CSS units and responsive properties. • Apply pseudo-classes on the links to create hover and focus effects.	L1,L2,L3,L4
6	Consider the following HTML structure for a webpage to write the code for (a), (b) and (c). Provide your own text inside the tags wherever required. <pre><div class="container"> <div class="box" id="box1"></div> <div class="box" id="box2"></div> <div class="box" id="box3"></div> </div></pre> I. Write CSS code to target and style the boxes with IDs "box1" and "box3" using attribute selectors. Apply the following styles: • Set the background color to #2ecc71. • Set the text color to #ffffff. • Add a padding of 10px. II. Utilize CSS to style the text content inside the boxes. Implement the following: • Increase the font size to 14px. • Set the font weight to bold. III. Write CSS code to add a solid border around the box 2 with the following specifications: • Border color: #3498db	L1,L2,L3,L4

	• Border width: 2px • Border style: dashed	
7	Create a multi-section webpage that displays a "Knowledge Base" on different HTML and CSS topics. Use lists, links, and various CSS styles for structure, organization, and navigation. Following things to be included: I. Table of Contents: • At the top of the page, create a numbered list (ordered list) as a Table of Contents with links that jump to specific sections of the document using internal anchors. • Each list item should link to a specific section below. II. Section Content: • Create individual sections for each topic (e.g., Lists, Linking, Formatting, Selectors, and Pseudo- Classes). • Each section should have a heading, image, horizontal rule (using `<hr/>`), and several paragraphs. • Use definition lists for explanations of terms in each section. III. CSS Styling: • Apply font properties and text decoration to headings and paragraphs. • Use pseudo-classes for the links in the Table of Contents (e.g., changing link color on hover). • Style the horizontal rules to have custom thickness and color. IV. Layout and Styling: • Apply margins and padding to structure the sections. • Use the box model properties to add borders around each section. • Use a fixed-position back-to-top link that stays in place while scrolling to return to the Table of Contents.	L1,L2,L3,L4
7.	Design and develop an event invitation webpage(based on college upcoming event or fest) using HTML and CSS. You can organize the content using Html tags like <code><header></code>, <code><section></code>, <code><footer></code>, <code><article></code>). Include the following details in your invitation: • Event Title • Date and Time	L1,L2,L3,L4

	• Venue/Location • RSVP Details • Brief Description of that Event • Additional Information (e.g., dress code, theme, etc.) Choose a proper color scheme and font that reflects the theme of the event. Use CSS properties to enhance the design, including: • Background colors or images • Borders and padding • font styles • font sizes • font weights • Hover effects on links	
8.	Design a webpage by adding multiple images in the background. Assign eight different images to the background to create the four corners and four edges of the certificate border. You can refer to the below image.	L1,L2,L3,L4

Hint : Make the border class inside the div and specify the following elements:

- font-family as Times New Roman
- font-style as italic
- font-size as 170%
- text-align to be center
- padding as 60px
- width as 350px
- height as 500px
- image(gif, png, jpg or jpeg) as a background with its position repetition

Note: Text written on the certificate needs to be the same but as a background image you can use flowers, stars, or any character images you want.
